

## AICP Internship Task

We are supposed to design an application like FoodPanda for one of our client. Our application will only support the delivery services.

There will be three users.

- Admin
- Restaurant
- Customer

Create separate screens where restaurants and customers can signup and admin will approve their account after verification.

Restaurant:

- Create screen where restaurant can add their dishes with specific information.
- Create screen where restaurant can see placed orders

Customer:

- Create screen where customer can see list of restaurants. on clicking restaurant customer can see available dishes.
- Order Placement screens.
